INTERPRETATION:

NEGATIVE FOR INTRAEPITHELIAL LESION OR MALIGNANCY.

Electronically Signed Out by:
SK
10/4/2006 09:59:14

The Pap Test is not a diagnostic procedure and should not be used as the sole means to detect cervical cancer. It is only a screening process designed to aid in the detection of cervical cancer and its precursors. Both false-negative and false-positive results can occur, therefore any suspicious physical findings or clinical symptoms should be investigated as appropriate.
